

Xanadew™ mDICE 3D™ Technology for Mobile Applications

A new user interface paradigm is needed to take full advantage of next generation mobile high definition displays, integrated processors such as the NVIDIA Tegra, and virtual environments such as Second Life. **mDICE 3D** allows users to quickly multitask and content surf using a virtual cube interface. Users load their playlists, then roll to surf, shake to shuffle, and scan with automatic reload to access a virtually endless amount of content. Unlike LG's S-Class and Samsung's TOUCHWiZ, **mDICE 3D** renders in true 3D and supports roll, pitch, yaw, zoom-in, zoom-out and translucency.

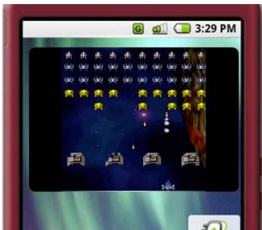

The **mDICE 3D** interface was inspired by David Reveman's Compiz virtual desktop manager cube, which makes extensive use of OpenGL. (See the Novell XGL/Compiz presentation at http://www.youtube.com/watch?v=-CgqWIX_Gsl.) Unlike the Compiz cube, **mDICE 3D** is not a virtual desktop. Rather, it affords a new way to quickly switch content *within* a mobile application. Communication – email, text messaging, instant messaging, voice over IP. Entertainment – music, movies, games, fashion. **Anytime. Anywhere. All together now.**™

mDICE Media 3D – for content surfers

Full-featured media player with extreme cube content surfing

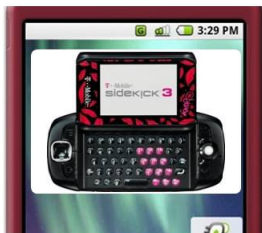

Supports all popular media formats including Flash®-based video
Audio, video, pictures, documents and presentations

mDICE Arcade 3D – for casual gamers

Simultaneous sessions with extreme cube game play

Supports casual Flash®-based games
Board, card, puzzle, word and classic video games

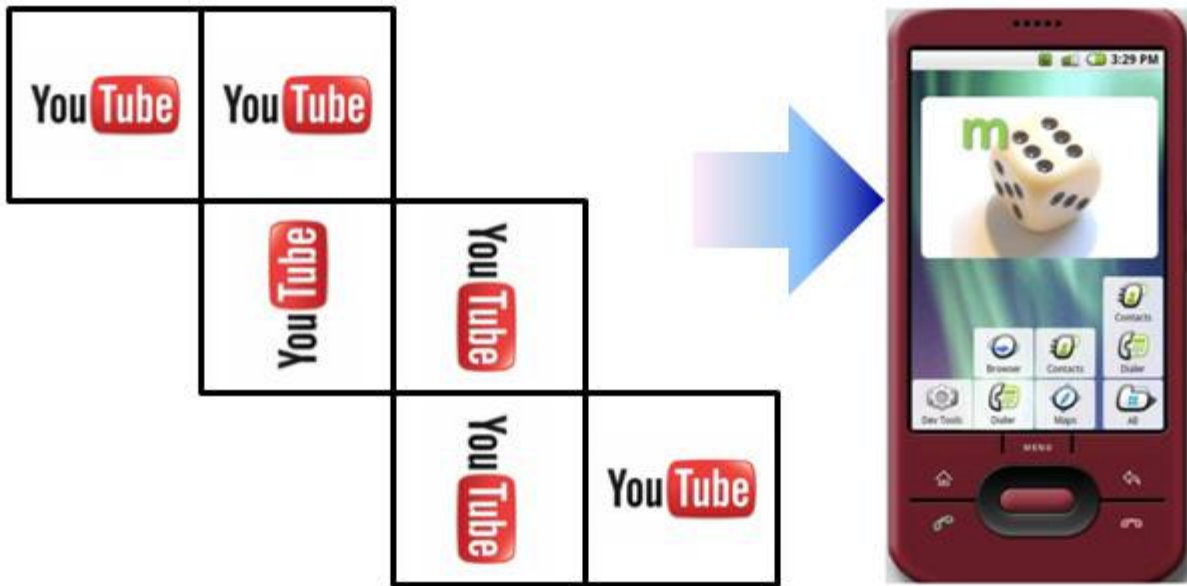

mDICE Designer 3D – for trend setters

Designer User Interface (DUI) with extreme cube styling

Supports customizable Flash®-based user interfaces
Diane von Fürstenberg, Isaac Mizrahi, Vera Wang and Michael Graves
